Präambel

PRÄAMBEL (PREAMBLE):

Nachhaltige Landnutzung und Siedlungsentwicklung für eine wachsende Weltbevölkerung, eine innovative Energieversorgung um den Klimawandel zu verlangsamen und angemessen auf seine weltweit zu erwartenden negativen Auswirkungen reagieren zu können sowie die Erhaltung der natürlichen Ressourcen als Basis terrestrischer und aquatischer Ökosysteme bei immer stärkerer Beanspruchung durch menschliche Nutzungen, stellen wichtige Aufgabenbereiche der Infrastrukturplanung dar. Hinzu kommen klassische Aufgaben im Bereich des Bauingenieurwesens für Verkehrswege, soziale Infrastruktur, Wasser- und Energieversorgung, etc.

Die im englischsprachigen internationalen Masterstudiengang Infrastructure Planning (MIP) ausgebildeten Ingenieurinnen und Ingenieure:

- haben Basiskenntnisse über alle maßgeblichen Teilbereiche der Infrastrukturplanung und verstehen deren grundlegende natur- und ingenieurwissenschaftliche Zusammenhänge,

- kennen die Methoden zur Entwicklung von raumplanerischen Konzepten, haben aber gleichzeitig die Fähigkeiten diese zu bewerten und sie durch geeignete technische Maßnahmen und Installationen zu implementieren

- können die Probleme durch und im Umgang mit Infrastrukturmaßnahmen abschätzen, erkennen und bewerten sowie dafür notwendige analytische, modellhafte und experimentelle Untersuchungen planen und durchführen,

- verfügen über die ingenieurwissenschaftliche Fertigkeit zur Entwicklung, zur Planung und zum Betrieb von Infrastrukturprojekten und kennen dabei auch die nicht-technischen Auswirkungen ihrer Tätigkeit,

- verfügen über die Kompetenzen zur organisatorischen und verwaltungsmäßigen Umsetzung von Infrastrukturmaßnahmen,

- können Aufgaben mit interdisziplinärem und internationalen Charakter vor dem Hintergrund kultureller, wirtschaftlicher und politischer Rahmenbedingungen im Team bearbeiten,

- verfügen über eine hohe wissenschaftliche Qualifikation.

Modul: 15160 Water and Power Supply

2. Modulkürzel: 021410105
3. Leistungspunkte: 6 LP
4. SWS: 0
5. Modulverantwortlicher: Dr. Sabine-Ulrike Gerbersdorf
6. Turnus: Wintersemester
7. Sprache: Englisch
8. Empfohlene Voraussetzungen: None
9. Dozenten: Ralf Minke, Sabine-Ulrike Gerbersdorf
11. Lernziele:

**Power Demand, Supply and Distribution:**
The students,
- know the German, European and worldwide energy markets related to demand, supply and its distribution capabilities
- are aware of that non-renewable energy sources are strictly limited and time-scales for conversion of energy markets long
- have an idea about the relations between energy, politics, social changes and influences on environment
- have a basic knowledge about present energy conversion systems, theoretical limits of efficiencies, and the potential to enhance applied technology
- have a basic understanding about where and how energy is provided and distributed
- comprehend the balance between load and supply in electrical grids and the resulting necessity for control energy.

**Water Demand, Supply and Distribution:**
The students,
- know the German and worldwide water systems related to demand, supply and its distribution capabilities
- have an overview on the water supply situation all over the world.
- recognize the different possibilities and levels of water supply
- have an idea of the relations between water, politics, social changes and influences on environment.

12. Inhalt:

**Power Demand, Supply and Distribution:**
- Energy demand, energy supply
- Energy generation
  - overview of different types of power plants
  - renewable energy
  - thermal power plants (conventional and nuclear)
- Areas of application of different power plants
- Emission control techniques
- Cooling of thermal power plants
  - methods
  - water resources aspects
- Energy transport and energy storage
- Net techniques
- Energy market
  - trade
- politics
- law
- social changes due to energy supply

**Water Demand, Supply and Distribution:**
- Water supply and water distribution: necessity, basic requirements, elements, hydrological cycle
- Water demand calculation: water consumption, water demand, consumer groups, losses, forecasting, design periods
- Water collection: Selection of source, groundwater withdrawal, springwater tapping, surface water intakes, rainwater harvesting, seawater desalination, recycling of treated sewage, drinking water protection areas
- Water transmission and distribution: necessity, hydraulic basics, dimensioning and calculation of branched and closed loop systems.
- Pumps and pumping stations: necessity, types, hydraulics for pumping design, pumping stations and pressure boosters
- Water storage: necessity, types and functions of tanks and reservoirs
- Case study: planning and design of a water supply system for a small town

14. Literatur: Lecture notes can be downloaded from the internet. Hints are given for additional literature from the internet as well as libraries.

| 11. Empfohlene Voraussetzungen: |

| 12. Lernziele: | The students have detailed knowledge about waste avoidance procedures in household and industry. Waste avoidance includes the ecology-oriented daily shopping, the substitution of contaminated materials in the industrial production as well as the Zero Emission Society. In the case of unavoidable waste fractions, the students acquire the competence to establish collection and transportation systems for these wastes, within the logistic, economic and legal frame. Main emphasis is given to the collection of recyclables. The students know the relevant factors which influence the waste amount and waste composition in general and in particular within the separate collection of recyclables. The students are acquainted with the state of the art of recycling technologies for separate collected paper, glass, metal and plastic including the pretreatment process. They have knowledge of the aerobic and anaerobic treatment and utilization of separate collected biowaste. Not avoided and recycled waste has to be treated before disposing off e.g. in a landfill site. The students possess a general knowledge of the mechanical and biological treatment technology as well as of the thermal waste treatment. They are able to evaluate the different treatment and recycling processes from an ecological and economic point of view. The students have knowledge about the most important components of the urban drainage and the basic treatment processes of wastewater. Thus they are able to compare different systems in dependence of changing boundary conditions and assess the effectiveness and pros and cons of the systems, e.g. concerning impacts on the environment, economical and operational aspects. They obtain an understanding for system connections between the urban drainage system and the wastewater treatment system as well as between the urban water system and the environment. |

| 13. Inhalt: | Solid Waste Management:  
Waste generation and waste composition  
National and international regulations for waste  
Waste avoidance  
Collection and transport of waste  
Separate collection of recyclables  
Sorting of recyclables  
Recycling technologies for paper, glass, metal, plastic  
Biological treatment of waste |
Waste Disposal
Ecological indicator systems
Waste Water Technology:
Basics of urban drainage and municipal wastewater treatment
Quantity and Composition of Wastewater
Urban drainage systems
stormwater treatment
mechanical wastewater treatment
biological wastewater treatment
sludge treatment
natural close and ECOSAN systems

Modul: 34420 Regional and Urban Planning II

4. SWS: 4 7. Sprache: Englisch
8. Modulverantwortlicher: Univ.-Prof. Dr.-Ing. Jörn Birkmann
9. Dozenten: Astrid Ley Jörn Birkmann
11. Empfohlene Voraussetzungen: prerequisite modules: Regional and Urban Planning I
12. Lernziele: The students are acquainted with basic methods of analysis and assessment in spatial planning. The students are able to cope with function, prerequisites and methodical problems of the methods presented. The lectures demonstrate the usage of planning instruments and methods based on planning cases from Germany and other countries.

13. Inhalt: The course Regional Planning II deals with the following planning methods:
   • Indicator-based monitoring and evaluation methods
   • Multi-criteria decision analysis (e.g. cost-benefit analysis, utility value analysis, analytic hierarchy process)
   • Methods of impact assessment
   • Techniques of demand forecast and land suitability analysis
   • Hazard and vulnerability analysis (climate change adaptation)

The course Urban Planning II gives an overview on:
   • Levels of spatial planning in urban areas
   • Urban development planning
   • Urban analysis
   • Urban renewal
   • Urban planning instruments
   • Land use planning and implementation planning
   • Legal framework

14. Literatur: Skript Regional and Urban Planning II

9. Dozenten: Jörn Birkmann  
Astrid Ley

10. Zuordnung zum Curriculum in diesem Studiengang:  
M.Sc. Infrastructure Planning, PO 903-2012, 1. Semester  
➞ Vertiefungsmodule  
M.Sc. Infrastructure Planning, PO 903-2012, 1. Semester  
➞ Zusatzmodule

11. Empfohlene Voraussetzungen:

12. Lernziele: The students understand the major challenges, objectives, strategies and instruments in spatial planning and urban development in Europe as well as in developing and countries in transition. The students are acquainted with the legal framework of comprehensive and sector planning and know the capabilities and limits of public planning as "positive" and "negative" planning.

13. Inhalt: The course Regional Planning I covers the following topics:  
- International Planning studies  
- Overview on current planning issues  
- Basic Terms of Spatial Planning  
- Strategies in Spatial Planning  
- Instruments of Spatial Planning  
- Performance of Plans, Assessing Plans

The course Urban Planning I provides an overview on the origin of planned urban development, starting in Greece and the Roman Empire, passing through all important periods up to the 21st century. The second part introduces urbanisation processes in third world countries, planned and unplanned urban conglomerations, including Mega Cities and Global Cities.

Birkmann et al. (2010): Adaptive urban governance: new challenges for the second generation of urban adaptation studies to climate change In: Sustainability science 5  

15. Lehrveranstaltungen und -formen:  
- 503301 Lecture Regional Planning I  
- 503302 Lecture Urban Planning I

16. Abschätzung Arbeitsaufwand:  
Time of attendance: approx. 45 hours  
Private Study: approx. 135 hours

17. Prüfungsnummer/n und -name: 50331 Regional and Urban Planning I (LBP), Schriftlich, 120 Min., Gewichtung: 1

18. Grundlage für ... :

19. Medienform:
20. Angeboten von: Raumentwicklungs- und Umweltplanung
Modul: 50500 General Aspects of Infrastructure Planning

4. SWS: 6 7. Sprache: Englisch

8. Modulverantwortlicher: Univ.-Prof. Dr.-Ing. Markus Friedrich

9. Dozenten: Frank Clemens Englmann Markus Friedrich Antje Stokman

12. Lernziele: The students understand the general planning process and can apply it for the purpose of integrating land use planning, urban planning and transport planning. They are familiar with fundamental economic aspects of infrastructure planning.

13. Inhalt: The lecture "Introduction to Integrated Planning" addresses the problem of incorporating regional/urban planning, water management, landscape planning, and transport planning in an integrated planning process. The challenges and methodologies of an integrated planning process are described from the perspective of different disciplines. External practitioners present approaches from their field of work. The students also learn how to write scientific reports and how to prepare and give a presentation. The lecture Economic Aspects of Infrastructure Planning covers the following topics:
- Ten Principles of Economics
- Thinking like an Economist
- The Market Forces of Supply and Demand
- Elasticity and Its Application
- Consumers, Producers, and the Efficiency of Markets
- Externalities
- Public Goods, Common Resources, Cost-Benefit Analysis and Economic Infrastructure
- The Costs of Production
- Firms in Competitive Markets
- Monopoly
- Externalities and Urban Planning
- Employment and Commercial Centres
- Location Requirements for Commercial Centres
- Land Suitability Analysis for Commercial Centres

8. Modulverantwortlicher: Dr. Hans-Georg Schwarz-von Raumer
Lydia Seitz
Manuel Krauß

11. Empfohlene Voraussetzungen:

12. Lernziele: The students have basic knowledge about basic environmental aspects in infrastructure planning concerning soils, species and biotopes, air quality and hydro systems. They know how to include environmental aspects in spatial planning and to assess environmental impacts of strategies and projects. They are aware and have gained skills in

- ecological evaluation methods (e.g. land suitability) and
- Environmental Impact Assessment

The students have first experiences in project exercises.

13. Inhalt:

A: Lecture "Ecological aspects of infrastructure planning" Introduction to the environment factors and goods: geological ressources, species and biotopes, ecosystem functioning, Air quality, hydrosystems,impact of land use systems (especially agriculture and urbanisation, ecological landscape design.

B: Seminar "Environmental impact assessment" In the seminar students have the task to prepare a presentation and a paper about:

- Structuring and evaluation of environmental impacts of strategies and projects
- Legislative aspects
- Modelling and evaluation methods
- Tools for impact modelling
- Case study examples

Alternatively the students work on case study exercises covering strategic regional and urban planning as well as road, housing, industrial, water, sports, tourism and other infrastructure projects.

14. Literatur: Information will be provided during the lectures Additional material can be downloaded from ILIAS

15. Lehrveranstaltungen und -formen:

- 505201 Vorlesung Ecological aspects of infrastructure planning
- 505202 Seminar Environmental impact assessment

16. Abschätzung Arbeitsaufwand: Sum 204 h

18. Grundlage für … :

19. Medienform:

20. Angeboten von: Landschaftsplanung und Ökologie
Modul: 50540 Transport Planning and Modelling

4. SWS: 5  7. Sprache: Englisch
8. Modulverantwortlicher: Univ.-Prof. Dr.-Ing. Markus Friedrich
9. Dozenten: Markus Friedrich
Ullrich Martin
11. Empfohlene Voraussetzungen:

12. Lernziele: The students understand the main characteristics of various transport systems and modes, including slow modes, car, public transport, inland waterways and air transport. They are familiar with the fundamental concepts of transport planning and modelling considering the specific situation in developing countries.

13. Inhalt: The lectures and exercises cover the following topics:
- introduction to transportation planning
- transportation planning process
- data collection and surveys
- land use and travel demand
- travel demand forecasts
- trip distribution and mode choice
- traffic assignment and supply analysis
- road network planning
- public transport planning
- railway planning (special aspects of railway transport, structure of tracks, planning of routes)
- railway operation (basic terms of railway operation, basics of spacing trains, determination of capacity, aspects of scheduling)
- inland waterways (special aspects of inland navigation, structure of waterways, planning of waterways)
- airports (special aspects of aviation, structure of aerodromes, planning of airports)
- transport policy concepts

The exercises on transport modelling introduce the students to software for travel demand forecasting models:
- building a network model (nodes, links, public transport lines, centroids), calculating indicator matrices (skims) describing the service quality
- trip generation from land-use data,
- trip distribution and mode choice,
- assignment for private and public transport,
- methods to analyse a transport network (node flows, selected link analysis),
- data transfer to and from GIS via shapefiles.

9. Dozenten: Markus Friedrich, Richard Junesch, Marion Aschmann, Manfred Wacker, Jörn Birkmann, Anette Gangler, Astrid Ley

11. Empfohlene Voraussetzungen:

12. Lernziele: The students will gain insight into an integrated approach to infrastructure planning, covering the following topics:

- Regional Development Planning
- Urban Planning and Design
- Transport
- Ecology
- Socio-Economic Aspects

13. Inhalt: The students practice integrated infrastructure planning skills and apply theoretical knowledge in a real life situation. They gain experience in data processing and analysis by developing a conceptual framework for use in an integrated planning process. The students will work in groups with data on the study area, which will be located in the Stuttgart Region. Topic specific planning guidelines will be developed, as well as scenario specific visions and land use plans. An interdisciplinary team of lecturers will be available for the students during the whole working period. The students have to fulfil the following deliverables:

- Analysis of the existing situation / fundamentals (phase 0)
- Objectives, Planning Guidelines and Spatial Concept (phase 1)
- Large Scale Planning (phase 2)
- Urban Master Plan and Implementation Plan (phase 3)
- Final Report, including several maps

### Modul: 19310 Urban Drainage and Design of Wastewater Treatment Plants

2. Modulkürzel: 021210251  
5. Modulsdauer: Einsemestrig  

3. Leistungspunkte: 6 LP  
6. Turnus: Sommersemester  

4. SWS: 5  
7. Sprache: Englisch  

8. Modulverantwortlicher: Dr.-Ing. Ulrich Dittmer  
9. Dozenten: Harald Schönberger  
Ulrich Dittmer  

10. Zuordnung zum Curriculum in diesem Studiengang:  
M.Sc. Infrastructure Planning, PO 903-2012, 2. Semester  
→ Spezialisierungsmodule  
M.Sc. Infrastructure Planning, PO 903-2012, 2. Semester  
→ Zusatzmodule  

11. Empfohlene Voraussetzungen: Chemistry and Biology for Environmental Engineers  
Sanitary Engineering  

12. Lernziele: Advanced knowledge of processes and concepts for urban drainage and municipal wastewater treatment systems  
Basics of construction and dimensioning of different urban drainage systems, stormwater treatment facilities and wastewater treatment plants as a base for dimensioning and discussion of proved and innovative technologies  
Deeper understanding for system connections as base for a decisions during the planning process  

13. Inhalt: Design of sewer systems and stormwater treatment  
(Dr.-Ing. Ulrich Dittmer)  
principles of collection and disposal  
design of combined and separate sewer systems  
Sustainable urban drainage systems (SUDS) and low impact design(LID)  
Application of rainfall runoff models (computer exercise using U.S. EPA Stormwater Management Model)  
different techniques for treatment and retention  
design of treatment facilities  
Design of wastewater treatment plants (Prof. Dr.-Ing. Heidrun Steinmetz)  
Municipal wastewater treatment  
different techniques for advanced biological wastewater treatment (nitrogen and phosphorous removal)  
principles of process engineering  
design of biological wastewater treatment plants and the main important aggregates  
design of sludge treatment plants  
Seminar: feasibility studies  
(Prof. Dr.-Ing. Heidrun Steinmetz and external consultants)  
special examples for sanitation concepts for world wide application  
Ecological sanitation and resource orientated systems  
case studies

15. Lehrveranstaltungen und -formen:
• 193101 Vorlesung und Übung Design of Sewer System and Stormwater Treatment
• 193104 Exkursion
• 193102 Vorlesung und Übung Design of Wastewater Treatment Plants
• 193103 Seminar Case Study

16. Abschätzung Arbeitsaufwand:
Time of attendance: approx. 70 hours (including 4*4 hours for excursion) 1,5 SWS
Private Study: approx. 110 hours
Lecture 1 Presence time: 28 hours, self study 30 hours, project 0, Sum: 58 hours
Lecture 2: Presence time: 28 hours, self study 30 hours, project 40, Sum: 58 hours
Case study: Presence time: 14 hours, self study 10 hours, project 0, Sum: 25 hours

17. Prüfungsnummer/n und -name:
19311 Urban Drainage and Design of Wastewater Treatment Plants (PL), Schriftlich, 120 Min., Gewichtung: 1

18. Grundlage für ...:

19. Medienform:

20. Angeboten von: Siedlungswasserbau und Wassergüterwirtschaft
Modul: 19360 Water Quality and Treatment

2. Modulkürzel: 021210051  
5. Moduldauer: Einsemestrig

3. Leistungspunkte: 6 LP  
6. Turnus: Sommersemester

4. SWS: 4  
7. Sprache: Englisch

8. Modulverantwortlicher: Carsten Meyer

9. Dozenten: Harald Schönberger  
Carsten Meyer

10. Zuordnung zum Curriculum in diesem Studiengang:  
M.Sc. Infrastructure Planning, PO 903-2012, ➞ Zusatzmodule  
M.Sc. Infrastructure Planning, PO 903-2012, 2. Semester ➞ Spezialisierungsmodule

12. Lernziele:
• The students learn how to characterize and protect water bodies as well as to improve the water quality
• Students understand the contribution of wastewater treatment to the preventive protection of receiving waters and they learn the basic methods of water quality management instruments
• Students understand the necessity of water treatment as essential element of drinking water supply
• Students learn the chemical, physical and biological background of water treatment technologies, their possibilities and boundaries and they are able to develop, design and dimension treatment schemes for different raw water qualities

13. Inhalt:
Water Quality Management:
• Terms and introduction: environmental data from Germany
• Characterisation and assessment of flowing waters, stagnant waters and groundwater
• Water quality parameters, WHO drinking water guidelines, targets for drinking water and sanitation, description of water quality in relation to use
• Improvement of water quality, reduction of pollution load, point pollutants and diffuse loads, improving the self-purification capacity of waters, technical helps, assessment of progress
• Water quality management, the European Union Framework Directive, quality planning and maintenance, monitoring networks

Water Treatment:
• Water supply and water treatment: basic requirements, drinking water standards
• Mechanical treatment: Screening, Sieving, Sedimentation, (Membrane)Filtration, Gas-Exchange, Flotation
• Carbondioxide-Carbonate-Balance: relevance, chemical background
• Deacidification: mechanical and chemical methods
• Removal of iron, manganese and arsenic: methods
• Decarbonization: chemical methods
• Flocculation
• Adsorption
• Disinfection: chemical and physical methods
14. Literatur: Lecture notes and material for exercises will be provided during the lecture. Hints are given for additional literature from the internet as well as libraries, e.g.
  • American Water Works Assoc.: Water Quality and Treatment, McGraw-Hill Inc., 1999
  • Nicholas P. Cheremisinoff: Handbook of Water and Wastewater Treatment Technologies, Bitterworth und Heinemann, Boston Oxford Auckland Johannesburg Melbourne New Delhi, 2002
  • WHO Guidelines, 2006
  • Mutschmann, J, Stimmelmayr, F.: Taschenbuch der Wasserversorgung, Vieweg-Verlag

15. Lehrveranstaltungen und -formen:
  • 193601 Lecture Water Treatment
  • 193602 Lecture Water Quality Management

16. Abschätzung Arbeitsaufwand:
  Time of attendance: ca. 42 h
  Private study: ca. 138 h
  1) Lecture: presence time = 34,0, self study = 106,0, Sum = 140,0
  2) Exercise: presence time = 8,0, self study = 32,0, Sum = 40,0
  Sum Lecture (140) + Sum Exercise (40) = 180,0

17. Prüfungsnummer/n und -name:
  • 19361 Water Quality Management (PL), Schriftlich, 60 Min., Gewichtung: 1
  • 19362 Water Treatment (PL), Schriftlich, 60 Min., Gewichtung: 1

8. Modulverantwortlicher: Ralf Minke

9. Dozenten:
- Ralf Minke
- Ulrich Dittmer
- Klaus Werner König

10. Zuordnung zum Curriculum in diesem Studiengang:
- M.Sc. Infrastructure Planning, PO 903-2012, 3. Semester
  → Spezialisierungsmodule
- M.Sc. Infrastructure Planning, PO 903-2012, 3. Semester
  → Zusatzmodule

11. Empfohlene Voraussetzungen:
- Inhaltlich:
  - Vertiefte Kenntnisse der Abwassertechnik, der Wassergüte, der Wasserversorgung oder des allgemeinen Managements von Wasserressourcen.
- Formal:
  - Wasserversorgungstechnik I oder
  - Abwassertechnik I oder
  - Waste Water Technology oder Water Quality and Treatment

12. Lernziele:
- Fachlich:
  - Die Studierenden entwickeln ein Verständnis für Zusammenhänge über ihre Teildisziplin hinaus. Sie können bei Entscheidungen und Planungen zwischen konkurrierenden Belangen der Siedlungswasserwirtschaft, Wasserwirtschaft und anderer Infrastrukturbereiche fachlich fundiert abwägen.
- Methodisch:
  - Die Studierenden können selbstständig mit internationaler wissenschaftlicher Literatur zu ihrem jeweiligen Fachgebiet umgehen, Ergebnisse kritisch bewerten und so ein eigenes Bild des Standes der Wissenschaft erarbeiten und präsentieren.

13. Inhalt:
- Wechselwirkungen zwischen Teilbereichen der Siedlungswasserwirtschaft am Beispiel des Umgangs mit Regenwasser
- Jährlich wechselnde Spezialthemen entsprechend dem wissenschaftlichen und technischen Fortschritt

14. Literatur:
- Gujer, W. Siedlungswasserwirtschaft, Springer Verlag GmbH
- Mutschmann, J., Stimmelmayr, F.: Taschenbuch der Wasserversorgung, Vieweg-Verlag
- Jeweils die aktuellen Auflagen
- Diverse Merk- und Arbeitsblätter des DVGW und der DWA

15. Lehrveranstaltungen und -formen:
- 364503 Excursions
- 364501 Scientific Seminar
- 364502 Lecture Rainwater Harvesting and Management
16. Abschätzung Arbeitsaufwand:

17. Prüfungsnummer/n und -name: 36451 Special Aspects of Urban Water Management (Seminar presentation) (LBP), Schriftlich oder Mündlich, Gewichtung: 1

18. Grundlage für ... :

</tr>
<tr>
<td>12. Lernziele:</td>
<td>The students are able to evaluate different data sources, to carry through basic data acquisition and integrate different data into field and office GIS. They are able to apply spatial analysis techniques to real world GIS problems in environmental and regional planning (GIS-based modeling, network-, raster- and 3D-analysis). The students have the expertise and ability to manage small-scale GIS projects (data mining, analysis design, output delivery) within the planning workflow, from project definition to product delivery.</td>
<td></td>
</tr>
</tbody>
</table>
| 13. Inhalt: | GIS-based Data Acquisition Lecture:  
• introduction  
• GIS hard- and software for primary data acquisition  
• coordinate systems, geodetic datum and projections  
• coordinate transformations and conversions  
• terrestrial positioning and laser scanning  
• satellite-based positioning (GNSS)  
• overview of other acquisition methods  
• additional topics of mapping  
• data import from various sources (e.g. Web)  
• Web-GIS (e.g. Open Street Map)integrated data into GIS  
Exercises:  
• terrestrial and satellite-based data acquisition (field project)  
• integration of measured data into GIS (computer lab)  
• integration of web-data into GIS (computer lab)  
GIS in Environmental and Regional Planning Application cases:  
• land suitability analysis for urban development  
• accessibility of infrastructure facilities  
• Evaluation of soil functions  
• Urban Heat Island modelling  
• Biotope Networks and animal movement  
• Flood risk  
• Development capacity studies  
• Site analysis for wind power  
• GIS-based E-government and community participation |
Tools and methods:
• Model builder
• Spatial Analyst
• Network Analyst
• Map Algebra
• Neighbourhood Analysis
• Regression Modelling
• Multi Criteria Evaluation
• analysis design
• project management

Workflow:
• Geoprocessing,
• remote sensing data integration,
• advanced visual communication

9. Dozenten: Anette Gangler
Jörn Birkmann

10. Zuordnung zum Curriculum in diesem Studiengang:
M.Sc. Infrastructure Planning, PO 903-2012,
➞ Zusatzmodule
M.Sc. Infrastructure Planning, PO 903-2012,
➞ Spezialisierungsmodule

11. Empfohlene Voraussetzungen:
The students are able to analyze and present the development situation and problems or some specific topics related to the development of their own countries in a systematic way and to discuss development situations and problems or specific topics of other countries. They receive experience in analyzing, summarizing and presenting the aspects mentioned above in English language.
The students are able to investigate housing standards and typologies and the housing demand and supply.

13. Inhalt:
The course "Development Policy and Planning: A Seminar Conference" will be conducted as a series of (a) lectures, (b) consultations and (c) seminar meetings.
a) Lectures provide an overview of development history and current issues concerning development policy and planning. Students will choose a topic of interest within this context and propose an agenda and outline for the self-study of this topic.
b) Additional lectures on academic writing and presentation techniques as well as consultation hours will provide assistance for the preparation of a scientific paper on this topic.
c) A conference program for seminar meetings will be set up for authors to present their work in smaller groups (plenary sessions). Students participating in a plenary session peer-review papers of presenters and participate in the discussion.
The first part of the seminar Housing introduces housing typologies in Europe and Middle East. In the second part, participants portray the housing situation of their home countries with respect to typology, supply and demand, self-help models and spontaneous settlement patterns

</tr>
<tr>
<td>11. Empfohlene Voraussetzungen:</td>
<td>Basic notions of infrastructure planning</td>
</tr>
<tr>
<td>12. Lernziele:</td>
<td>The students understand techniques for dealing with complex decision situations and gain insights in the decision-analysis process for both public and private decision-making with all related steps. Social aspects that may influence planning process or outcome will also be discussed. The students are acquainted with fundamental notions of demography as far as urban and regional planning is concerned. The students are able to apply basic methods of demographic analysis and forecasting.</td>
</tr>
<tr>
<td>13. Inhalt:</td>
<td>The module consists of two courses: The lecture &quot;Decision Analysis&quot; will cover the following subjects: • Elements of Decision Problems • Structuring Decisions • Generating Objectives and Hierarchies • Generating Alternatives • Decision Making with Multiple Objectives • Risk and Uncertainty in Decision Situations • Collective Decision Making • Application to Infrastructure Planning The course Demographic Analysis and Forecasting will provide an overview of the most frequently appearing issues of demographic analysis and forecasting. It will consist of three main parts: Fundamental notions of (applied) demography and some of the methodical/conceptual problems linked with these notions. Selected fundamental approaches to analysing and forecasting natural growth (or decline) of population, will be presented and discussed critically. Examples of such analyses and forecasts will be calculated. Migration, as the most critical and most important aspect of population development under regional aspects, will constitute the main topic of the third part. Basic methods of analysing and forecasting migration will be presented and discussed with regard to their application on concrete cases.</td>

Modul: 50610 Public Transport & Railway Operation

4. SWS: 4 7. Sprache: Englisch

8. Modulverantwortlicher: Univ.-Prof. Dr.-Ing. Ullrich Martin
9. Dozenten: Ullrich Martin Martin Will

10. Zuordnung zum Curriculum in diesem Studiengang:
M.Sc. Infrastructure Planning, PO 903-2012, 3. Semester
➞ Spezialisierungsmodul
M.Sc. Infrastructure Planning, PO 903-2012, 3. Semester
➞ Zusatzmodule

11. Empfohlene Voraussetzungen:

12. Lernziele:

Part 1: To get to know the role of rail-bounded transport, the development of railway and public transport, the planning and decision-making process for infrastructure investment, basic principles of vehicle movements, and railway operation and control. In addition, students can deepen the understanding in practice from the concrete cases.

Part 2: The student will be acquainted with the basic knowledge of railway infrastructure and vehicles, including also the maintenance of rails, accessories and rolling stocks. They will get to know the manifoldness of construction of railways in developed and developing counties, and will be able to compare different transport systems and their variants. The advantages and the disadvantages of them will be concluded as well.

13. Inhalt:

Part 1: Introduction
• Historical Development of Railways
• Public Transportation System
• General Aspects of Safety

Evaluation of Projects
• Necessity
• Methods
• Example (with Exercise)

Dynamics of Vehicle Movements
• Physical Basics
• Resistances
• Grade-Speed Diagram
• Running Time Calculation (with Exercise)

Operation and Control
• Interlocking Principles
• Design of Schedules (with Exercise)
• Capacity Research (with Exercise)
• Traffic Control (with Exercise)

Part 2: Infrastructure
• Components of Infrastructure
• Construction of Tracks
• Construction of Routes
• Construction of Facilities
• Electrification
• Infrastructure Maintenance
• Route Study (Exercise)

Rolling Stock
• Types of Vehicles
• Elements of Vehicles
• Arrange Trains
• Maintenance

Special Aspects and Comparison
• High Speed Railway Systems
• Specific of Body-Tilting Technique
• Specific of Maglev Systems
• Comparison

M.Sc. Infrastructure Planning, PO 903-2012, 1. Semester
    ➞ Spezialisierungsmodule

11. Empfohlene Voraussetzungen:

12. Lernziele: Advanced Studies in Hydraulic Structures: The students,
   • Know about the basic features of hydraulic structures
   • have an overview what are the main components and know how to arrange them in order to ensure a satisfying operation
   • are able to dimension all parts of different hydraulic structures
   • are aware of implicating river works into an overall context of a fluvial system and know how to act and to evaluate in spatial and temporal interrelation
   • are able to realize the economic and ecologic significance of hydraulic structures as dams, reservoirs and hydro power plants
   
   Case Study in Hydraulic Structures: The students,
   • are able to use of the gained theoretical knowledge with the help of a practical example
   • are aware of the technical relations and their effects on non-technical areas of interest
   • can give a well-founded argumentation of chosen estimations and are able to present their own results
   • can give a convincing presentation
   • are able to assess objectively different planning alternatives

13. Inhalt: Advanced Studies in Hydraulic Structures: The course deals with main structural components of hydraulic engineering schemes such as weirs, dams, hydro power plants, pipelines and ancillary works. The main features as hydraulic and structural dimensioning are treated. The application of structural power plants, reservoirs and river development works is discussed. Conventional engineering methods as well as approaches with improved environmental compatibility are taken into consideration.
Case Study in Hydraulic Structures: The case study uses the content of the lecture "Advanced Studies in Hydraulic Structures". In working groups of 3 to 5 students a real hydraulic structures will be planned and completely dimensioned. There are hydraulic calculations to be carried out as hydraulic capacity of spillway, dimensioning of stilling basin, hydrological and sedimentological calculations. As well the stabilities of the structures itself has to
be checked. Additionally an analysis of the demand of potentially provided electricity, drinking water or irrigation water, resp. is required. The intermediate results will be presented by the groups. Every student has to deliver at least one presentation. Finally a poster for the final presentation and assessment has to be designed. This is the basis for the development of the assessment criteria for the different alternatives.

14. Literatur: Lecture notes can be downloaded from the internet. Additional detailed information for the case study will be provided during the lectures.

Modul: 50640 Ecological Design and Landscape Planning

4. SWS: 4 7. Sprache: Englisch

8. Modulverantwortlicher: Univ.-Prof. Antje Stokman
9. Dozenten: Antje Stokman

M.Sc. Infrastructure Planning, PO 903-2012, 3. Semester ➔ Spezialisierungsmodule

11. Empfohlene Voraussetzungen:

12. Lernziele: Students understand the major challenges, objectives, strategies and instruments for planning and designing urban landscapes in Europe as well as in developing countries. Basic notions of ecological infrastructure systems and their role for the urban landscape. Innovative and interdisciplinary approaches to ecological design and landscape planning are introduced, contextualized and considered in their application through selected international best practice examples.

13. Inhalt: This course presents the basic principles of landscape ecological theory applied to urban environments as well as the basic principles of landscape planning. The course will give an overview on actual environmental challenges related to the urban environment and explores the concepts and themes important to the contemporary practice of ecological design and planning - drawing on knowledge from the fields of ecology, engineering and landscape architecture. It will introduce different theories that try to re-center landscape planning and design around the goal of creating sustainable urban environments and cultural landscapes. Responding to contemporary urban and infrastructure development challenges, this course brings together a series of innovative concepts and theories to discuss different methods, models and measures of ecological design of combined landscape and infrastructure systems for the 21st century.

### 11. Empfohlene Voraussetzungen:
By means of a small project the students learn to set up, conduct and analyse the results of a survey regarding transportation behaviour. By this the previously gained theoretical and methodological skills are applied and implemented.

### 12. Lernziele:
The module consists of a theoretical and a practical unit. The theoretical part provides the students with an overview regarding research design and methodology with a special focus on quantitative social science methodology (survey design). Subsequently the students are introduced to the precise topic "transportation planning" in order to derive the specific research question for the practical phase. During the practical phase the students set up the research design and implement it correspondingly. After the data collection phase results need to be analysed and documented. By means of the module students are enabled to conduct empirical research projects, especially surveys, which supports the preparation of their respective Masters theses.

### 11. Empfohlene Voraussetzungen:

The topic of the Master Thesis can be handed out only the moment at least 78 credit points have been acquired already by the candidate. One month after 90 credit points have been acquired, the candidate is supposed to start the work on his master thesis or to ask for the assignment of the topic at the latest.

### 12. Lernziele:

The candidate shall be capable of dealing with a multidisciplinary problem from the context of infrastructure planning within a given time frame on the basis of scientific methods. He/she should also be able to present the results in an appropriate form both in writing and orally. The candidate should be capable of developing a suitable concept for the thesis including the selection of appropriate scientific methods as well as a realistic project schedule for the treatment of the selected topic in an international research environment. Effective scientific work shall be implemented throughout the thesis working period, the candidate shall learn how to discuss a scientific topic touching upon different disciplines in the field of infrastructure planning by discussing his topic with two different academic supervisors from two different fields of expertise.

### 13. Inhalt:

The Master's Thesis should illustrate that the candidate is in the position to deal with a multidisciplinary problem from the context of infrastructure planning within a given time frame on the basis of scientific methods. Candidates are encouraged to select a topic related to infrastructure planning problems or projects of their respective home country.

### 14. Literatur:

Recent literature on the topic of the scientific problem, project reports, interviews with representatives of institutions concerned with a project, data available or collected throughout the Master's thesis working period.

### 16. Abschätzung Arbeitsaufwand:

Sum 900h

### 18. Grundlage für ...
